HYDRO-FORCE™ ACCESSORIES

TRITECH™ MATERIAL

TriTech™, a 3-ply reinforced material with a polyester mesh-core encased in two layers of laminated PVC that offers superior strength and durability. This premium marine grade material can withstand the most extreme nautical conditions including exposure to petroleum products and ultraviolet rays.

DROP STITCH™ MATERIAL

It's a wonder material that has been successfully used in such mission-critical applications as floating docks, high-pressure rescue lifting bags and even airplane wings! It owes its remarkable properties of extreme rigidity combined with astonishing lightness to a network of thousands of polyester threads (the "drop stitches" referred to in the name). These threads securely connect the material surfaces internally, while carefully-applied sidewalls seal the finished inflated cavity to create a panel that effectively supports considerable weight while itself being light and easily portable when deflated.
